

Joshua Clanton

— Design for the **WEB**

How I Work

It's all about meaning. From choosing colors for a page header to determining whether a table or a definition list is most appropriate for the page's underlying structure, I try to make each decision about bringing more meaning to the user's experience.

The end result? I make websites as simple and easy to use as possible so that users can focus on doing what they need to do and website owners can deliver their message more effectively.

Skills & Craft

- A love of Web Standards
- Expert-level knowledge of CSS
- Valid & meaningful (semantic) (X)HTML
- Excellent written communication skills
- Applying the principles of graphic design to the web
- Intelligent web typography

Tools

- Dreamweaver
- Photoshop
- Illustrator
- Basic knowledge of Linux

Education & Experience

- 1.5 years with Cybergate, Inc., during which I transitioned from a brief internship to Cybergate's primary front end web designer.
- Bachelor of Science in Business Information Technology from Rogers State University
